

Running tutoring operations, end to end.

From scattered spreadsheets to one automated system — log a session once, and hours, invoices, reports and alerts all follow by themselves.

A plain-English overview for leadership

THE PROBLEM

Running on manual spreadsheets

every number re-typed by hand, sheet to sheet

- **Numbers drift apart** — update one sheet, forget another; no single source of truth
- **Easy to mistype** — a keystroke bills the wrong hours or pays the wrong amount
- **No warnings** — a package hits zero unnoticed
- **Slow month-ends** — hours of tallying and copy-paste
- **No privacy** — one shared sheet, everyone sees everything
- **Families in the dark** — no way to self-check hours or reports

What the old way was costing us

Lost revenue

Packages ran to zero unnoticed — free lessons, or an awkward stop mid-programme.

Wasted hours

Every month-end meant hours of manual tallying and reconciliation.

Costly errors

Billing and payroll mistakes from copying numbers between sheets.

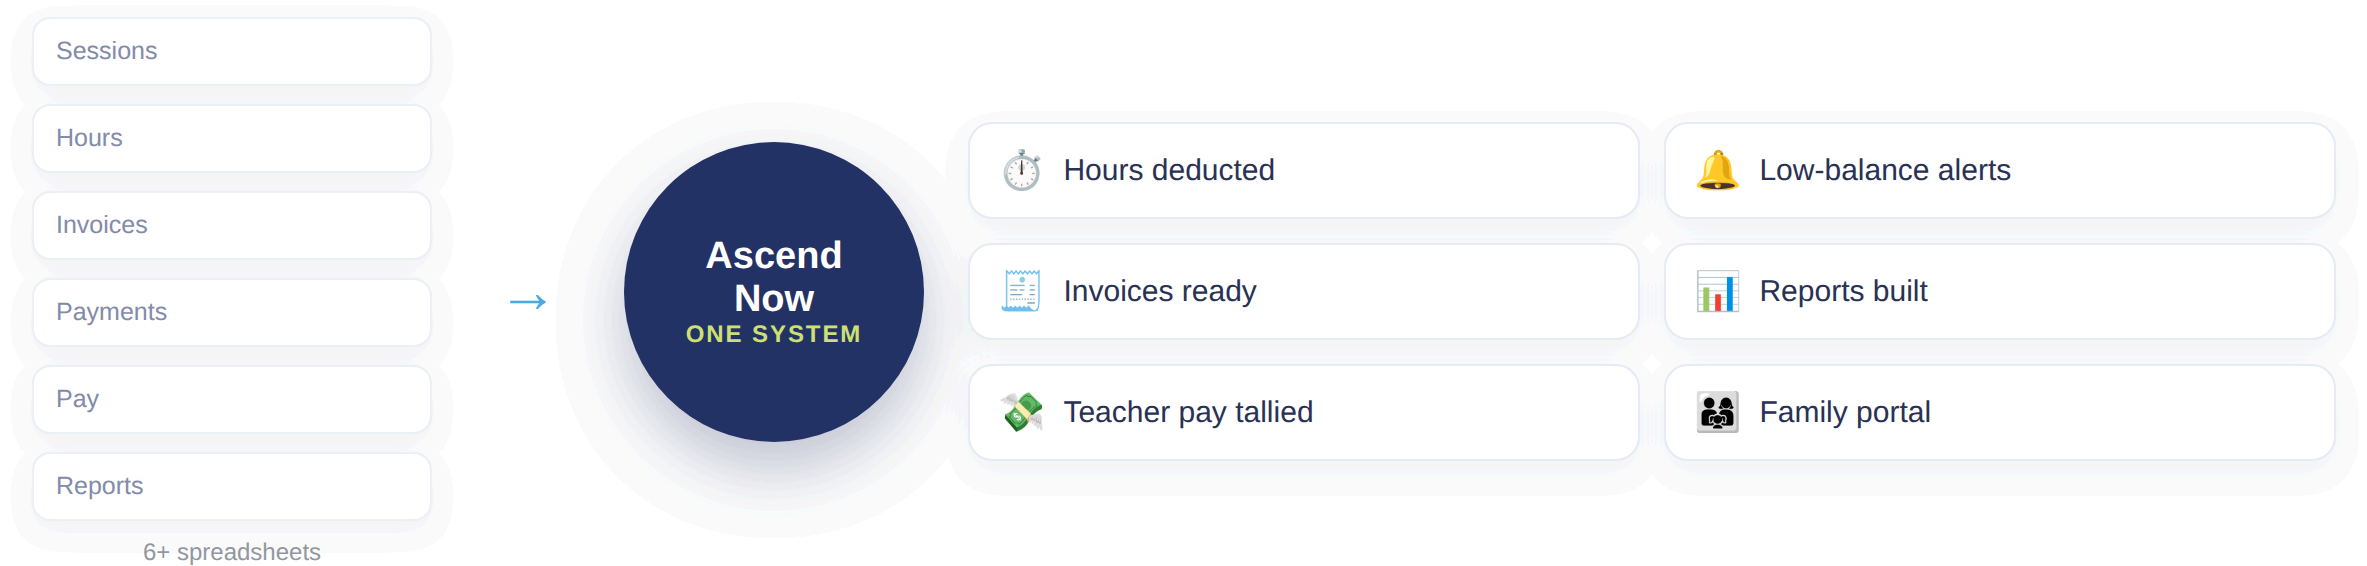

Couldn't scale

More students meant exponentially more manual bookkeeping.

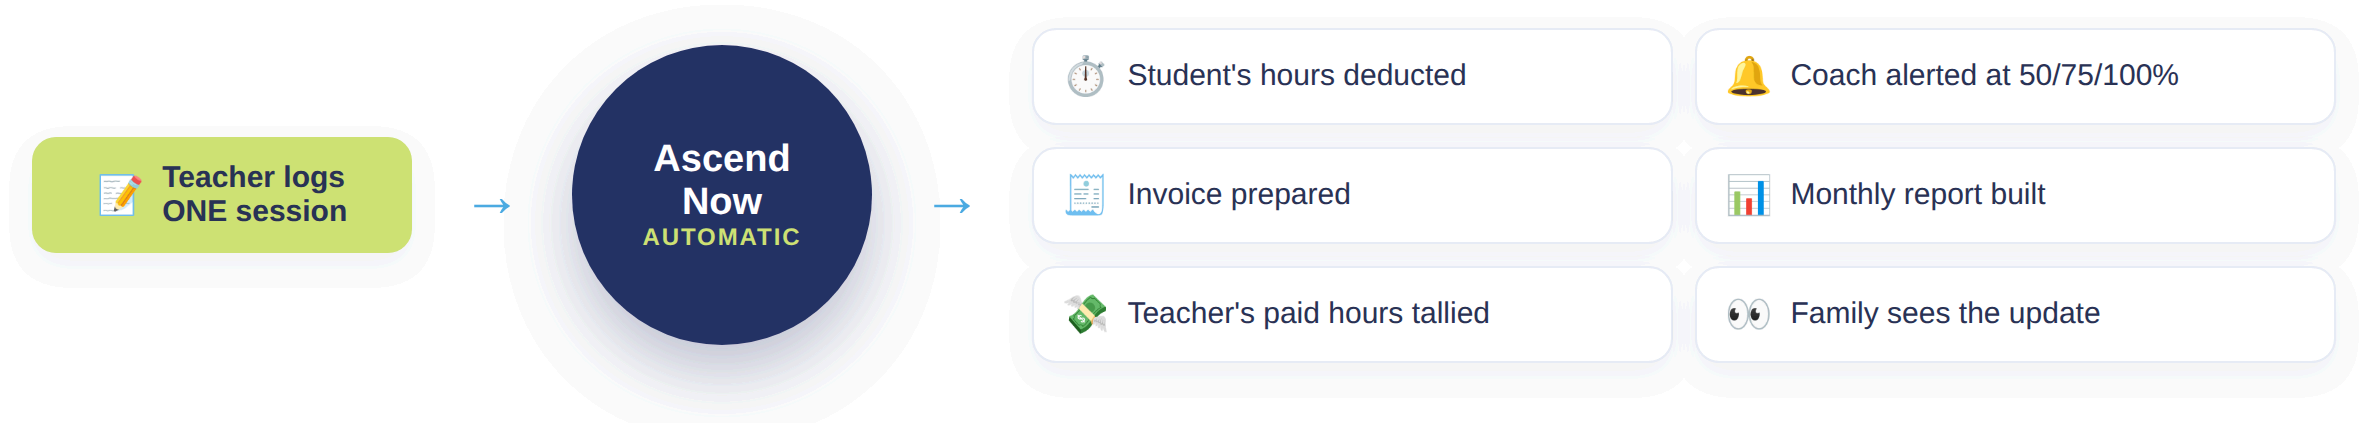

THE FIX

One source of truth — no more manual work

A teacher logs a session like a diary entry — everything downstream is calculated automatically, not re-typed.

From one session log, everything flows

No copying between sheets. The session log is the single fact; everything else is a live view of it.

WHO IT SERVES

Four kinds of user, one system

Admin / Office

- Runs the whole operation
- Enrols & reviews payments
- Reports & analytics

Teacher

- Logs their own sessions
- Sets AI homework
- Zero admin overhead

Performance Coach

- Guides assigned students
- Tracks progress & renewals
- Coaching notes

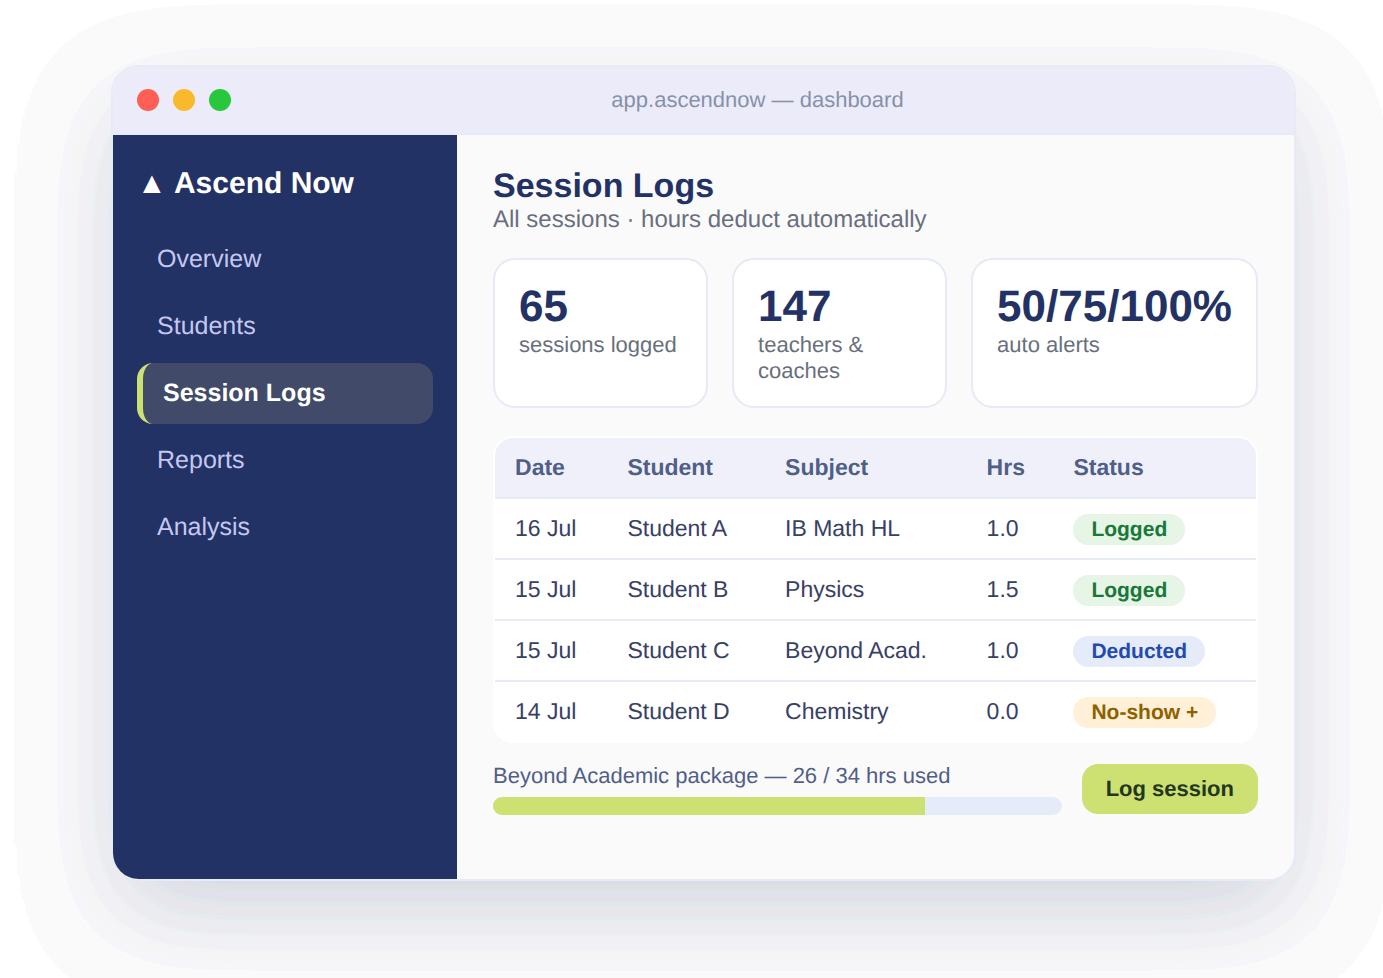

Student & Parent

- Hours & reports, self-serve
- Attempts homework
- One login per family

Everyone signs in and sees only what's relevant to them — and there's **no public sign-up**, so the roster always matches real students and staff.

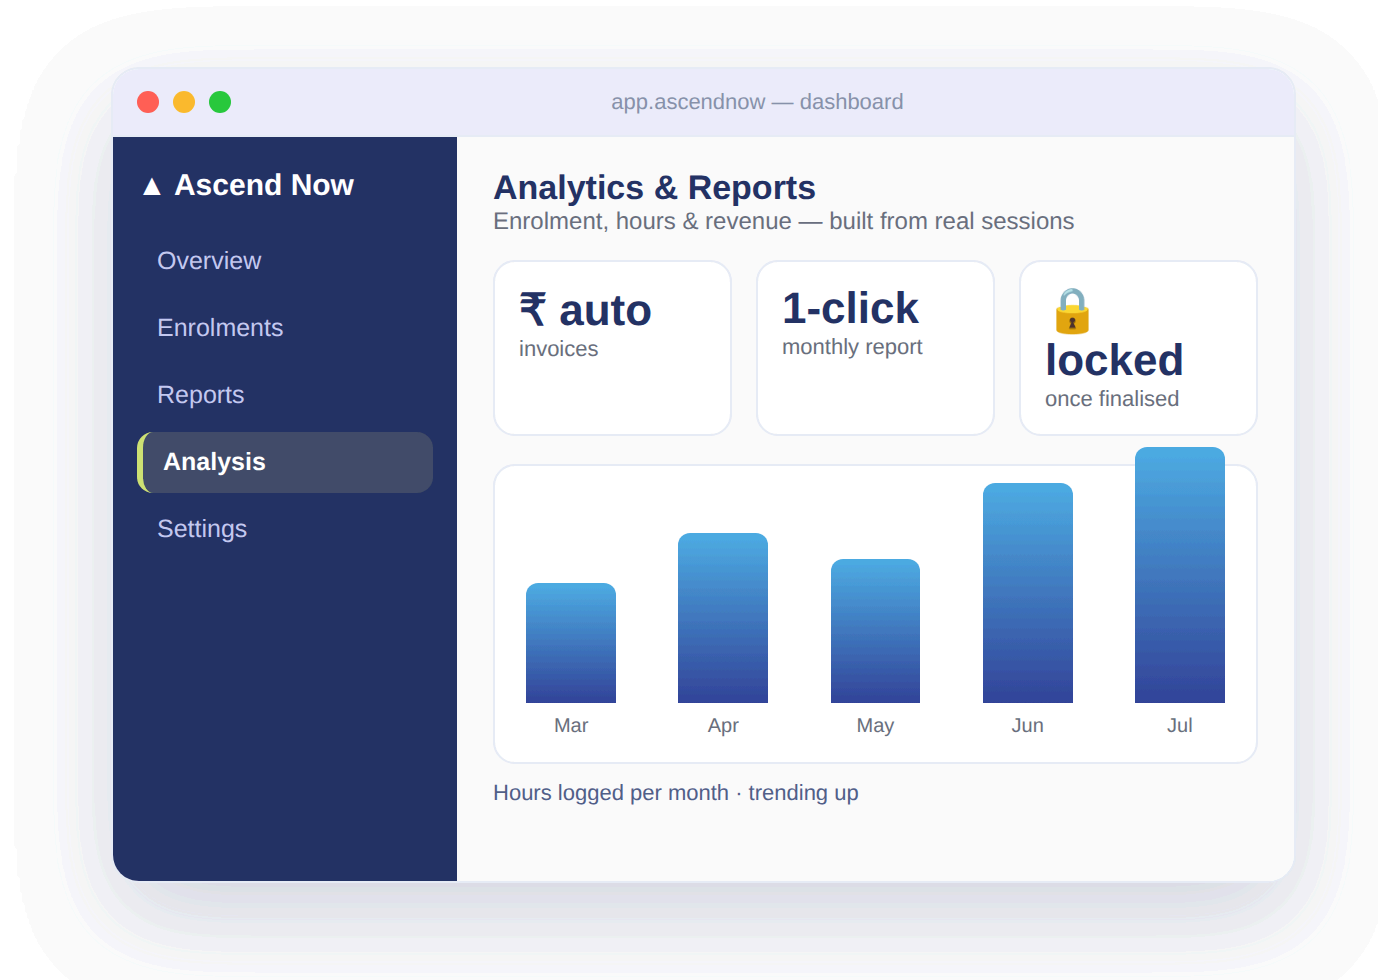

Log sessions — hours track themselves

- Under a minute to log a session — student, subject, time, notes
- The student's **hours deduct automatically** — no second sheet
- No-shows handled fairly**, with consistent pay/hours rules
- Coaches get **low-balance alerts** at 50 / 75 / 100%

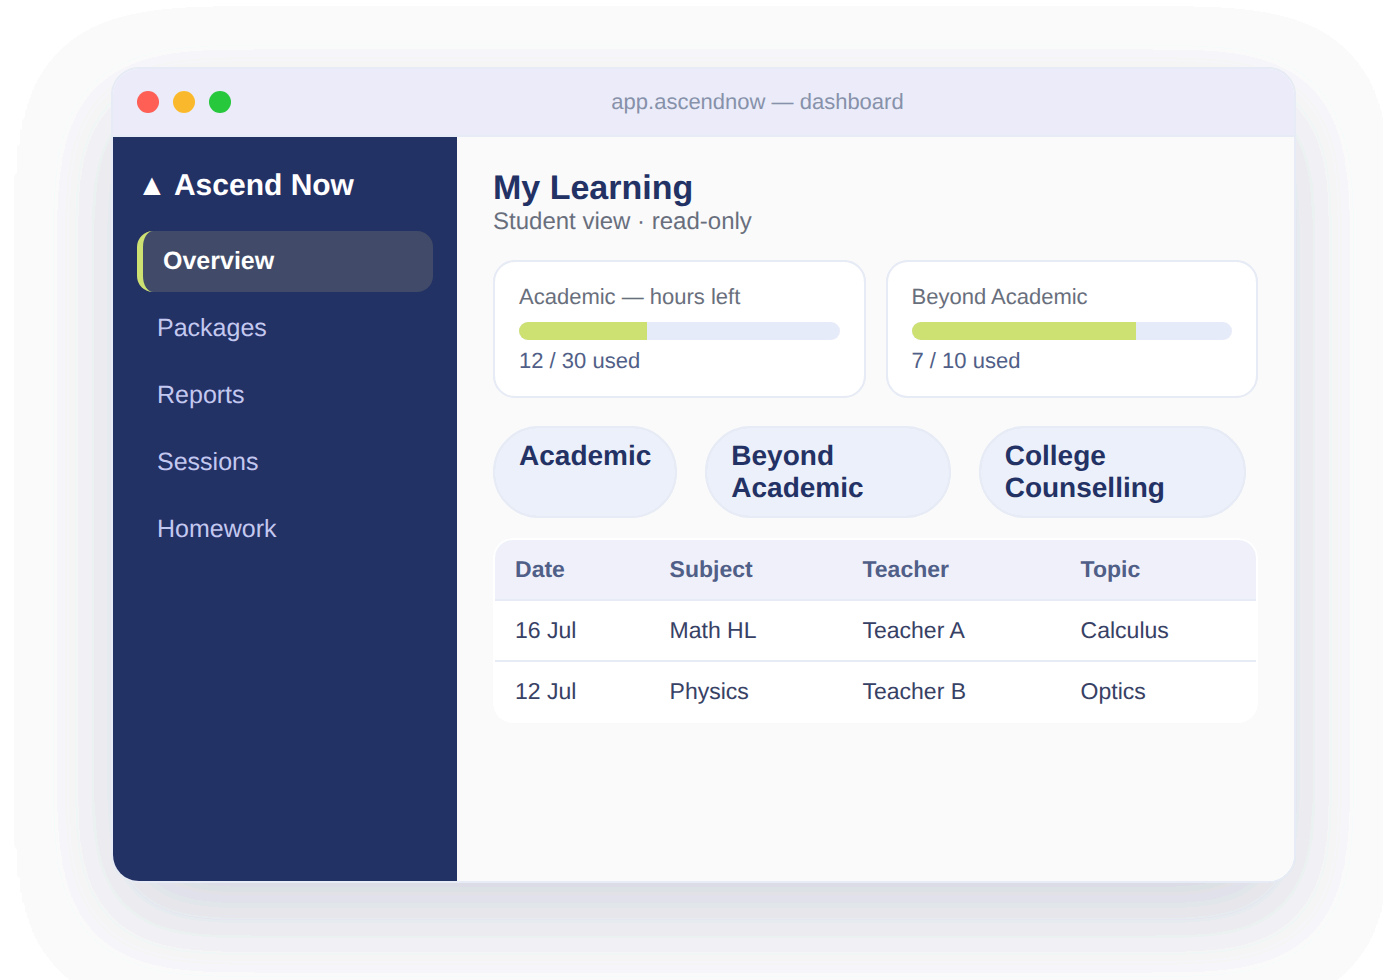

Enrolment, invoicing & reports — automatic

- A guided **enrol** → **pay** → **confirm** flow, with a secure payment link
- Invoices and monthly reports **build themselves** from real sessions
- Reports **lock** once finalised, so figures can't drift
- Live **analytics** on sessions, teachers and students

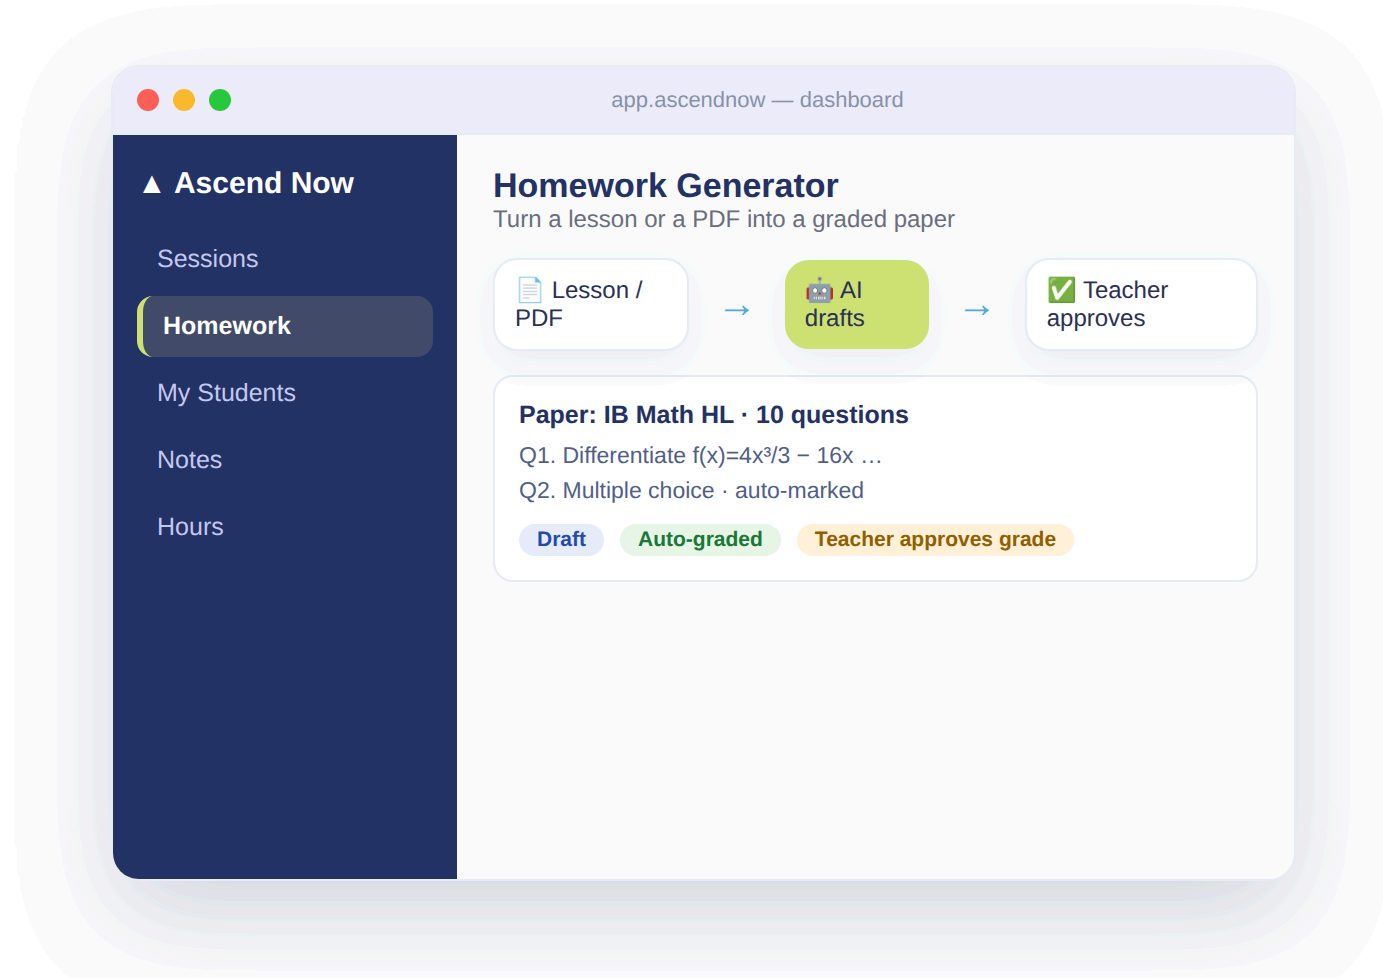

A transparent window for families

- **Hours remaining**, on screen, any time — no email, no waiting
- Full **session history**, reports and teacher notes
- **Homework** to attempt, with published grades
- **One login** covers the student and their family

The AI Homework Generator

- Turn a lesson or an **uploaded PDF** into a full paper in minutes
- AI drafts and marks it — a **teacher always approves** the grade
- More **value per student** and a clear competitive edge
- Powered by **Google Gemini**

Built secure, on one source of truth

Security — by design

-  Each person signs in and **sees only their own data**
-  Enforced **in the database**, not just the screen
-  Documents & payment proofs kept in **private storage**
-  No public sign-up — every account is admin-created

Database snapshot — live
